Icon Express

Documentation

Icon Express installs its VIs on the Addons palette under the "IconExpress" sub-palette.

GetNumicons: Returns the number of icons stored in an EXE or DLL file.

Returns the number of icons in an exe or dll.

Geticon: Indexes a particular icon stored in an EXE or DLL file and returns the image as a LabVIEW image type.

Icon data is extracted from an exe or dll file in bmp format and is converted to a LabVIEW image type.

GetAssociatedIcon: For non-exe or dll files the associated icon can be extracted. For example, if you want to get the PDF icon for a PDF file, the path can be provided to a PDF file and this VI will request the associated exe icon from Windows.

GetAssociatedIcon.vi

The associated icon of any file or directory is extracted in bmp format and is converted to a LabVIEW image type.

BuildTree: Builds a directory tree in a tree control starting from the specified folder.

Builds a collapsible directory tree structure from the input top-level directory path. **AddIconsToTree:** Adds the associated icon for each file in the directory tree to the tree control.

AddIconsToTree.vi

Adds the associated directory/file icons to the directory tree.
